

Moiré Fringes Generation

Abstract

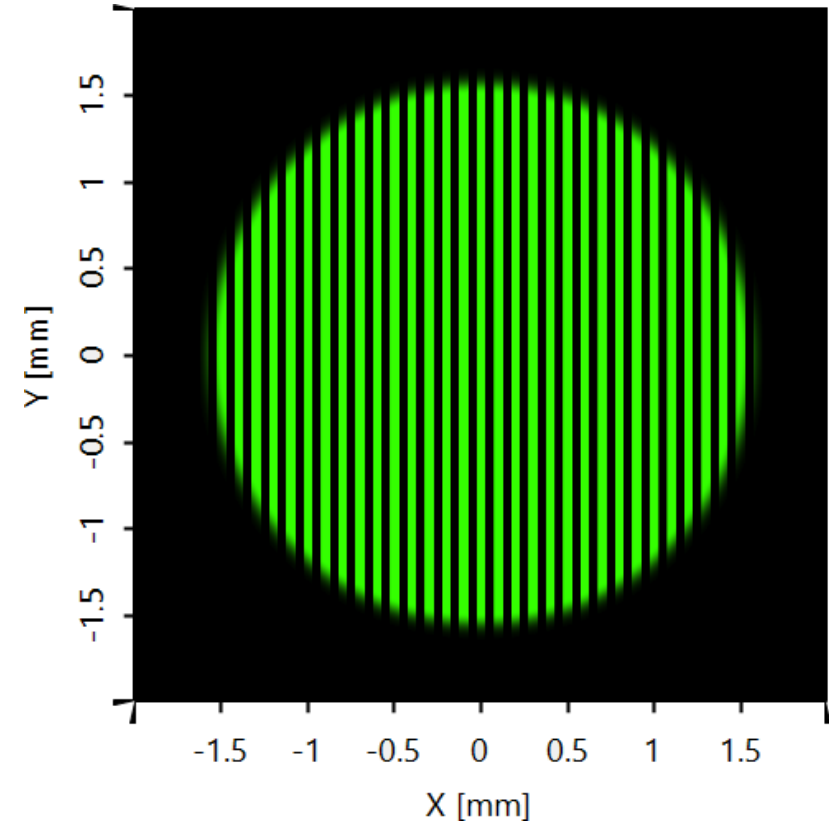

In this Demo we seek to model Moiré pattern generated by periodic apertures and gratings. Moiré fringes are one of the interference effects which occur due to overlaying of a periodic pattern with another periodic pattern containing displacement, tilt or even different pitch size. Physical optics provides fast analysis of interference pattern.

Task: Simulation of Interference Using Periodic Apertures

Simulation Result Without Tilt

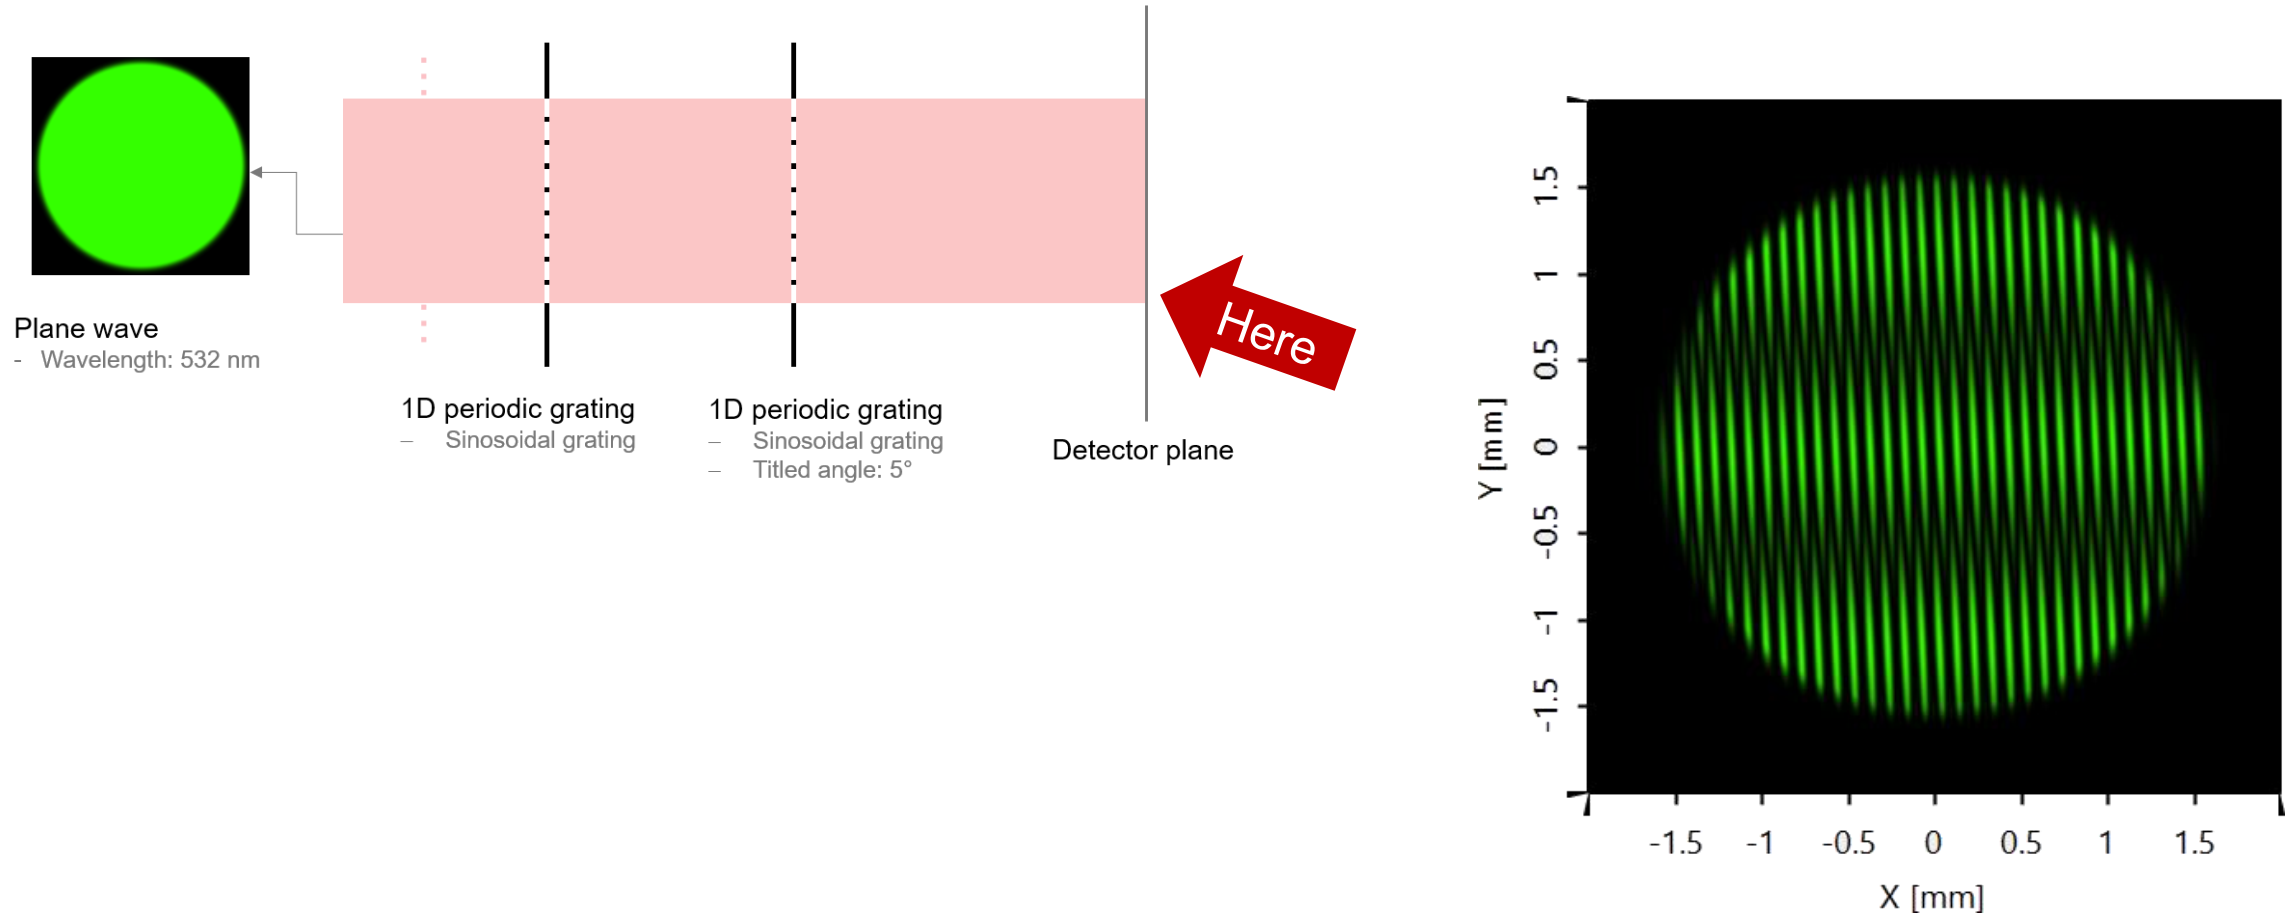

Simulation Result with Tilted Periodic Aperture

Task: Simulation of Interference Using Periodic Gratings

Simulation Result with Tilted Periodic Grating

Simulation Results For Various Tilt Angles

Tilt angle: 3°

Tilt angle: 5°

Tilt angle: 7°

Tilt angle: 9°

Document Information

title	Moiré Fringes Generation
document code	Demo.26
version	1.0
VL version used for simulations	2020.1
category	Demo
