

# Import Text Files into VirtualLab Fusion

# Abstract

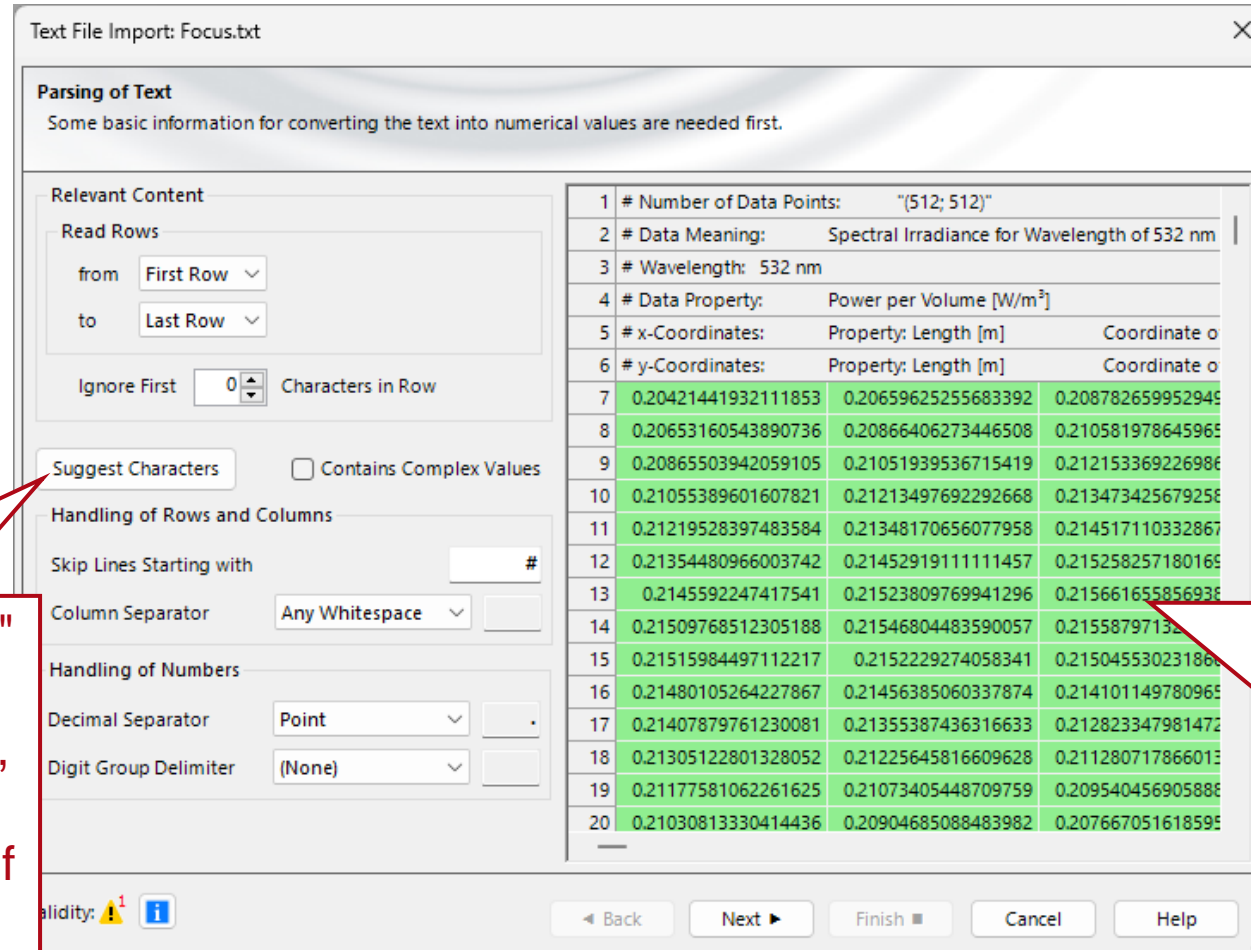

VirtualLab Fusion provides an intuitive workflow for data importation, supporting various data formats. Users can import 2D data arrays, (such as field data) or both equidistant and non-equidistant 1D arrays, e.g., dispersion curves for specific materials. This Use Case introduces a tool that enables users to import data from any type of text file.

# Import of Text Files

You can access the import tool by navigating to File > Import > Import Text File. It supports various custom text data formats like txt or csv files.

# Import Text Files

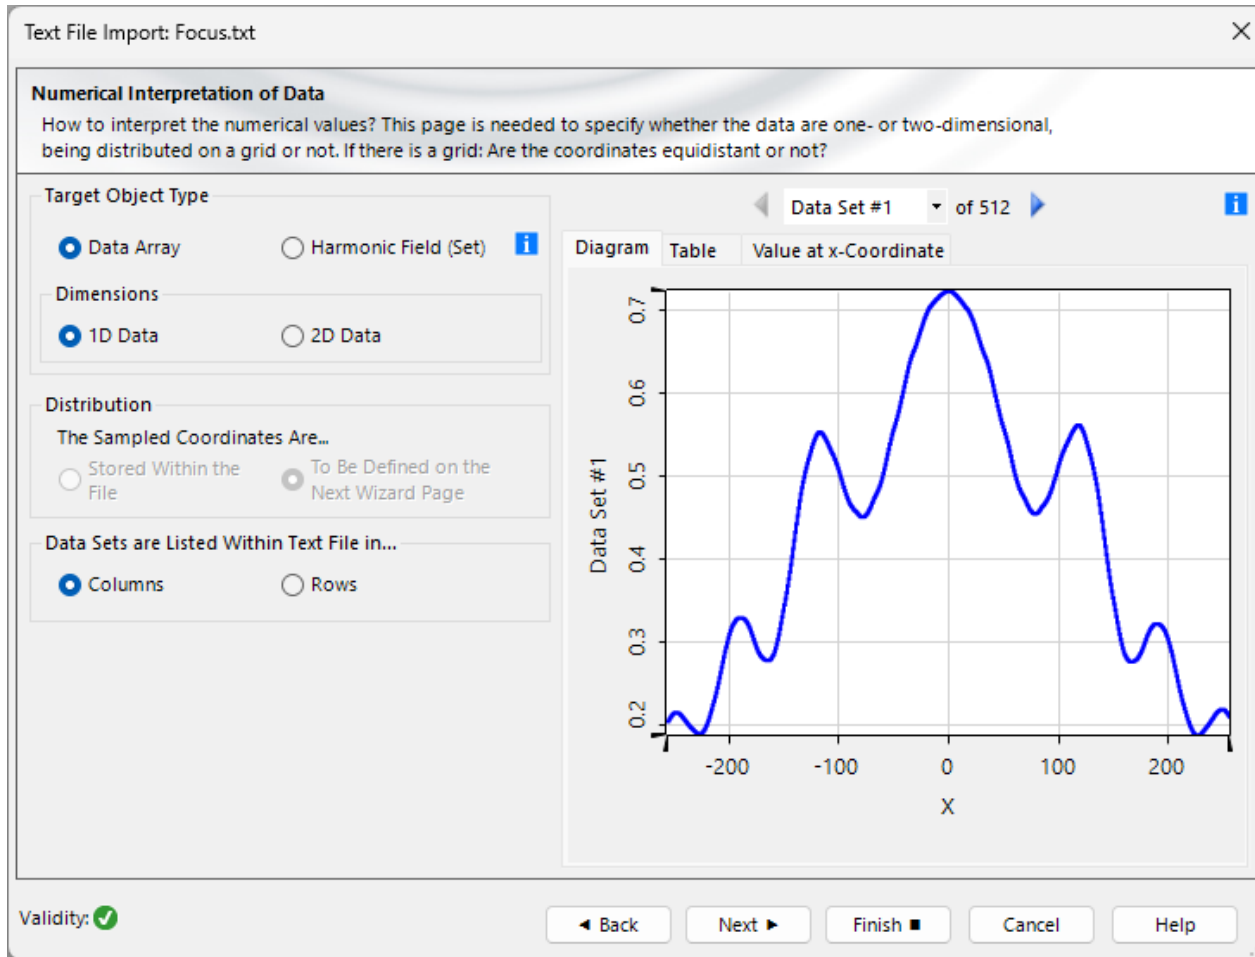

The "Suggest Characters" button automatically adjusts fitting parameters, although users can also specify them individually if desired.

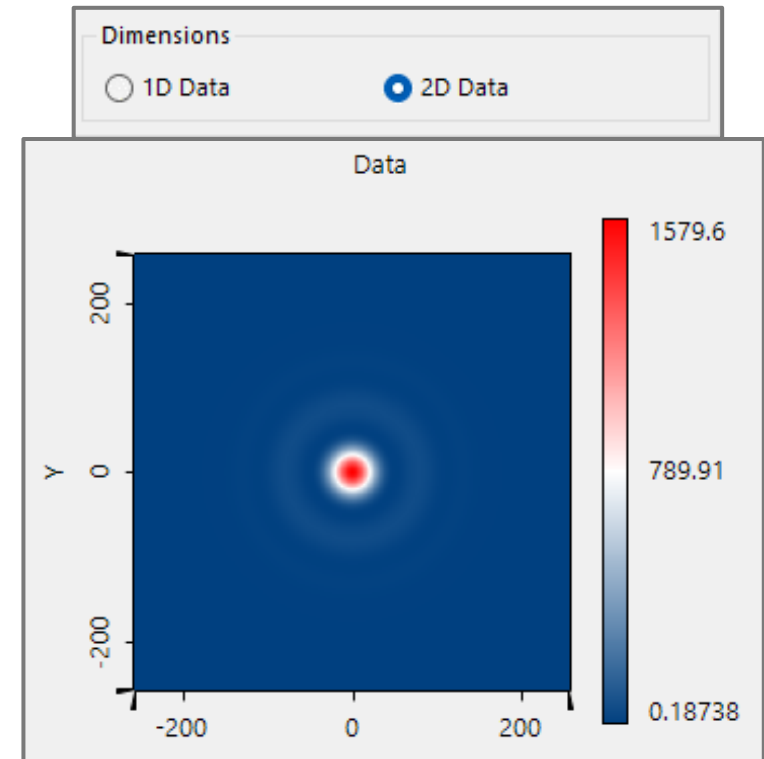

A preview will be displayed on the right side, highlighting any unreadable entries in red.

# Type of Data Array

1D and 2D data arrays can be imported. For 1D data with multiple subsets, the user can specify if the individual sets are represented by the columns or rows of the text file.

# Type of Data Array– Non-equidistant Data Arrays

For non-equidistant data arrays, users can specify whether the coordinates are already provided in the file or need to be defined in the wizard. If the former option is chosen, the software extracts coordinates from the first column (or row). If the latter option is selected, the same workflow as for equidistant data follows.

coordinates

0,1879	1,07	1,212
0,1916	1,1	1,232
0,1953	1,12	1,255

# Definition of Coordinates

Text File Import: Focus.txt

**Coordinate Properties and Interpolation & Extrapolation**  
The properties of the independent variables (coordinates) are to be set here. Additionally, interpolation and extrapolation settings can be defined.

**x-Axis**

Description: X

Physical Property: No Unit

Interpolation Method: Nearest Neighbor

Dimensions

Sampling Distance: 1

Positioning: Center Around Zero

**y-Axis**

Description: Y

Physical Property: No Unit

Interpolation Method: Nearest Neighbor

Dimensions

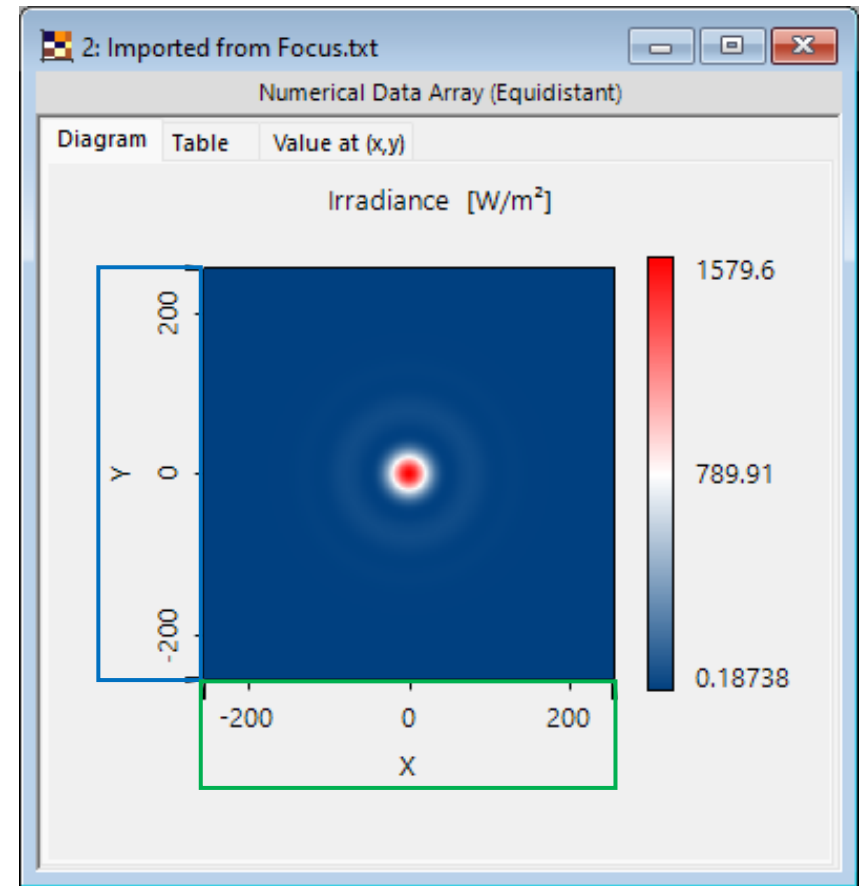

Sampling Distance: 1

Positioning: Center Around Zero

Extrapolation: Outside Values are Equal to the Nearest Border Data Point

Validity:

# Physical Properties - Unit

Text File Import: Focus.txt

Subset Properties  
The properties of the dependent variables are to be set here.

Copy From...

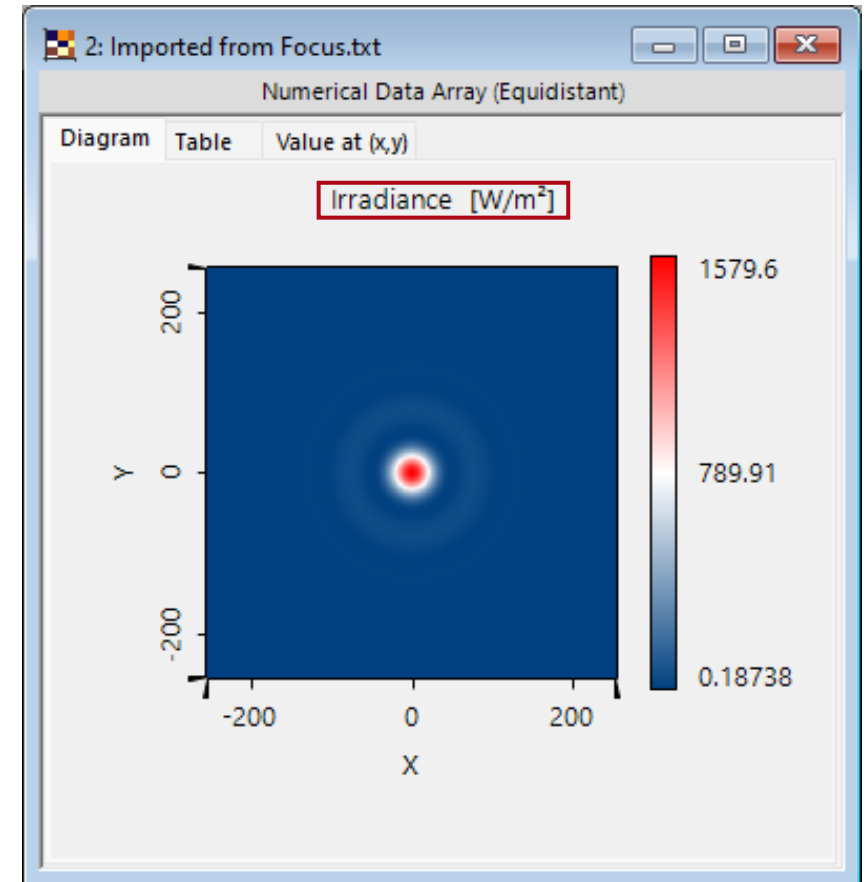

Subset #	Description	Physical Property	Factor
1	Irradiance	Power per Area	1

Validity:

VirtualLab Fusion offers a wide array of different units for imported data arrays!

- Miscellaneous
- Base Quantities and Reciprocals
- Angles
- Radiometry
- Photometry
- Environment
- Densities
- Dimensionless
- Energy / Power
- Fields

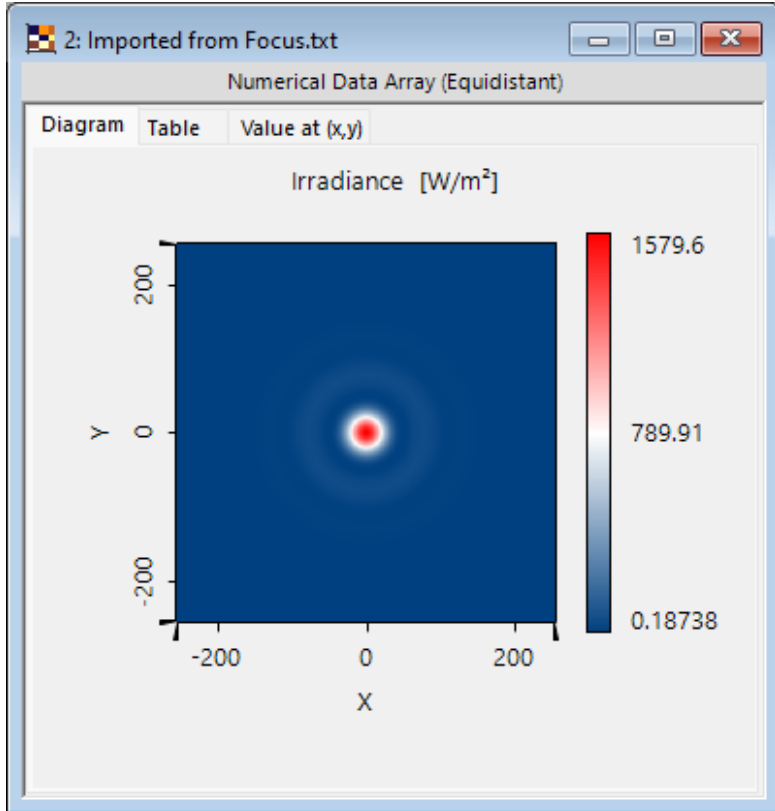

- Absorption Coefficient
- Area per Energy
- (Area per Energy)<sup>2</sup>
- Energy (eV)
- Energy (J)
- Energy per Area
- Energy per Volume
- Power
- Power per Area
- (Power per Area)<sup>2</sup>
- Power per Solid Angle
- Power per Solid Angle and per Area
- Power per Volume
- Volume per Energy
- (Volume per Energy)<sup>2</sup>

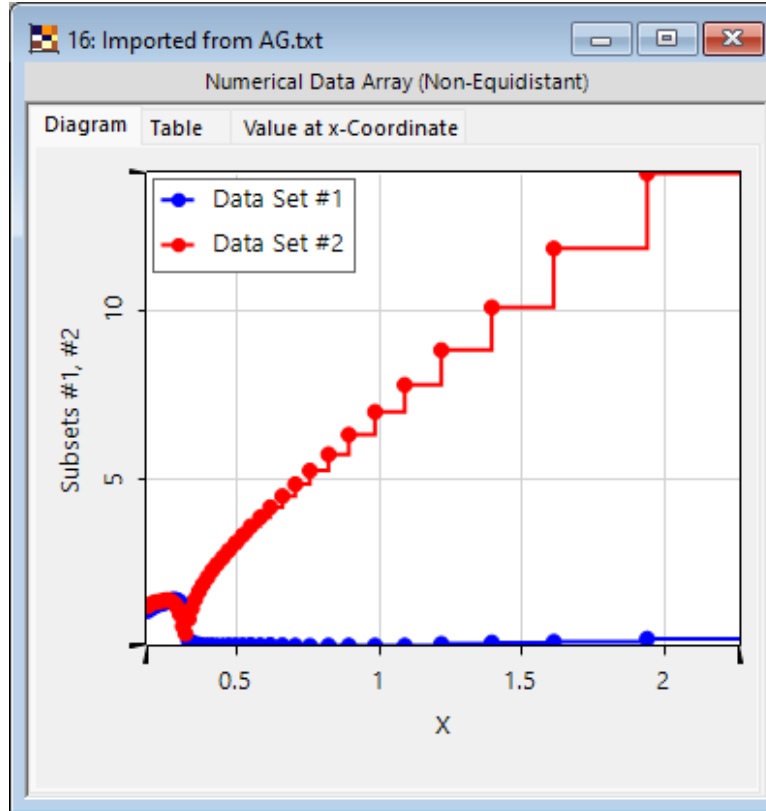

# Examples

focus of an aspheric lens

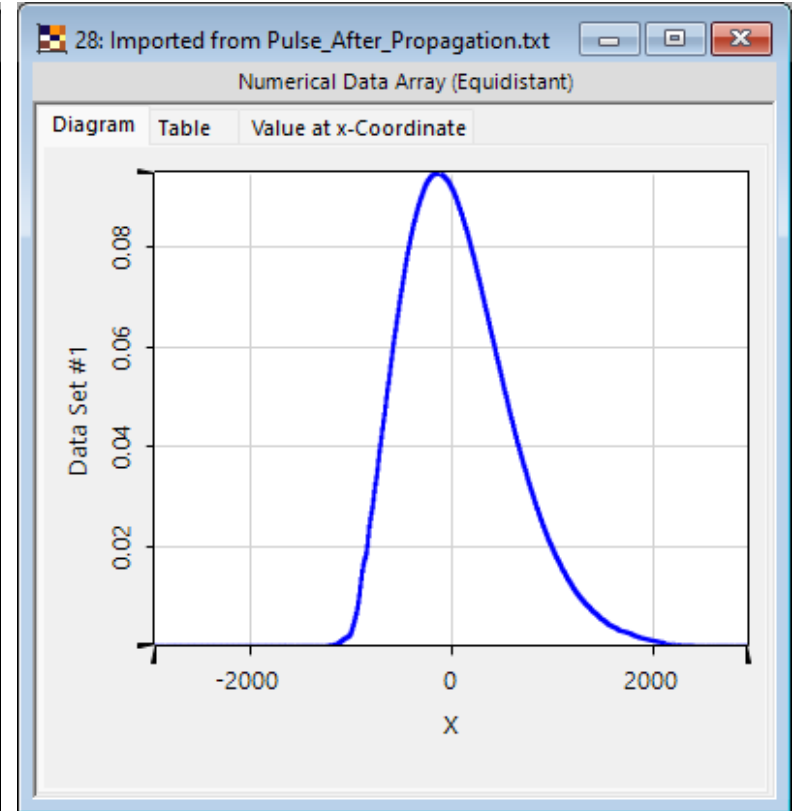

2D, equidistant grid

material data of silver

1D, non-equidistant, multiple subsets

propagated pulse through sea-water

1D, equidistant

# Document Information

title	Import Text Files into VirtualLab Fusion
document code	SWF.0052
document version	1.0
software edition	• VirtualLab Fusion Standard
software version	2024.1 (Build 1.106)
category	Feature Use Case
